Illustrated Flora of Albania Gerhard Pils

"Illustrated Flora of Albania" is the first book in English that covers all the wild plants of a Balkan country, thereby including also a nearly complete and fully coloured iconography. More shortly treated are only some plant genera still insufficiently studied in Albania, e.g. largely apomictic groups like *Taraxacum*, *Rubus*, *Alchemilla*, *Hieracium* or notorious difficult grass-genus *Festuca*. Naturalists relying more on photos than on collected material hopefully will be able to determine most of the plants alone by comparison with the 5769 single illustrations. This should be possible even in more critical groups (e.g. *Apiaceae*, *Brassicaceae*, grasses, sedges), due to a lot of detail-illustrations, showing fruits, seeds etc. For each species, additional information like flowering-time, life form, preferred habitat is given in the dichotomous keys. Relevant sources are documented in a comprehensive reference-list.
